

Installation - Documentation

Your **MASTERNODE** Daemon „wolfcoind“ has to be running while the process below!

- 1) Download the Sentinel-Package for Wolfcoin into your /root/ directory

```
# cd /root  
# wget https://www.wolfpackbot.com/wallet/sentinel_wolfcoin_linux.tar.zip
```

- 2) Unpack the file with

```
# unzip sentinel_wolfcoin.tar.zip  
# tar xvpfz sentinel_wolfcoin_V1.tar.gz
```

- 3) Change directory into /root/sentinel

```
# cd /root/sentinel
```

- 4) Update system packages and ensure virtualenv is installed

```
# sudo apt-get update  
# sudo apt-get -y install python-virtualenv  
# sudo apt-get install virtualenv
```

- 5) Finally run the command below and there should be no errors

```
# venv/bin/python bin/sentinel.py
```

- 6) Create the cron-job for executing the command every minute

```
# crontab -e
```

add the line below

```
* * * * * cd /root/sentinel && ./venv/bin/python bin/sentinel.py 2>&1 >>  
/root/.wolfcoin/sentinelwolfcoin-cron.log
```

(this is ONE line)
